SILENCER SERIES

Anatomically Designed Uniform Footwear

Comfort On the Move.

Thorogood's Silencer Series footwear is the first uniform footwear designed to fit the human foot in motion.

It flexes in an anatomically accurate way to complement natural foot motion while walking and running, preventing fatigue and providing long-lasting comfort.

Performance-applied Comfort

A contoured semi-oblique toe shape and forward motion tread design allows toes to spread out and grip during steps like bare feet do. The foot works more naturally and easily.

Hand-sewn Quality Construction (HQ)

The (HQ) sole construction allows maximum flexibility when walking or running, a dramatic improvement over brands

that use rigid midsoles and glued on soles. A padded collar and tongue, moisture-wicking knit lining, and full grain super soft leather upper all contribute to create a comfortable fit.

Energy Return Midsole

Combined with a shock-absorbing two-density polyurethane footbed, the Silencer Series' energy return midsole uses a high tech action system that stores kinetic energy in every step and releases it as forward motion.

Comfort — Support — Stability — Enhanced Slip Resistance

The Silencer is the most natural uniform footwear system on the market today!
